

Jack's Nature Journal
5-14-09

This afternoon it was cold and wet, with the sky 8 oktas full of drifting, spooky stratus clouds. The air pressure was 30.18 inHg, the humidity was 72% and the temperatures were 64.9°F and 18.3°C. It was drizzling lightly, and the wind was coming from the West at 1.1 mph. The sun was entirely obscured by the drifting clouds.

For a bit of a change of pace this afternoon, we took a walk somewhere different. We walked to High Rock, and saw many plants and amphibians on the way. We saw a Red Eft, two Wood Frogs, Wild Columbine, Solomon's Seal, Perfoliate Bellwort and Mayapples in flower.
