

When was Mountain Lake formed????

Report by Amy and map by Lynn

Mountain Lake was formed during an ice age. Ice ages are when the temperature changes dramatically and snow and ice cover everything. Glaciers are giant “rivers” of ice, and with one of these Mountain Lake was formed. There were many ice ages, but the one that formed our lake was the Pleistocene ice age. The Pleistocene ice age was about 2 million years ago, and ended about 11,500 years ago.
